Rajath Shashidhara

rajaths@cs.washington.edu • homes.cs.washington.edu/~rajaths

Education

University of Washington **Seattle, WA**
Ph.D. Computer Science *2022–Present*
Advisor: Dr. Simon Peter
Areas: Systems & Networking

The University of Texas at Austin **Austin, TX**
M.S. + Ph.D. Computer Science, GPA: 4.0/4.0 *2019–2021*
Coursework: Operating Systems, Datacenters, Virtualization, Distributed Systems

Birla Institute of Technology and Science **Pilani, India**
M.Sc. Physics + B.E. Computer Science, GPA: 9.01/10 Distinction Class *2012–2017*
Awarded **Best Student of Batch 2017**
Advisors: Dr. Tapomoy Guha Sarkar & Prof. Sundar Balasubramaniam

Research

Google, Systems Research Group **Seattle, WA**
Student Researcher *2022–Present*
Advisor: Dr. Kimberly Keeton
Understanding the impact of tiered memory on application performance at datacenter scale.

University of Washington **Seattle, WA**
Graduate Research Assistant *2022–Present*
Advisor: Dr. Simon Peter
- Flexible high-performance transport protocol offload to programmable network devices.
- Scaling client-local NVM distributed filesystems using in-network replication, coordination and coherence services.
- In-network acceleration of data ingestion for large-scale ML training.

The University of Texas at Austin **Austin, TX**
Graduate Research Assistant *2019–2021*
Advisor: Dr. Simon Peter

Flexible TCP offload with Fine-Grained Parallelism (NSDI '22)
- Full stateful offload of TCP data-path to SmartNIC – frees CPU cores from TCP overhead.
- Fine-grained parallelization of the TCP data-path to achieve high performance on wimpy SmartNIC cores.
- Highly extensible offload with support for eBPF-based extensions.
- Memcached scales up to 38% better versus TAS kernel-bypass TCP stack by saving 50% per-request CPU cycles.

Distributed file systems with Client-Local NVMs
- Scaling client-local NVM filesystems like Assise beyond rack-scale.
- In-network caching, coordination and coherence mechanisms on programmable switches.

Distributed key-value store with co-located Serverless compute
- Aggregate compute and storage to exploit data locality.
- Improves execution time of serverless compilation workloads by 1.6x and 5x reduction in data movement compared to conventional disaggregated deployments.

Samsung Research **Bangalore, India & Suwon, South Korea**
Senior Software Engineer (Research) *2017–2019*
Advisors: Anshuman Nigam & Dr. Dojun Byun
5G Radio Access Network data-plane R&D
- Involved in the development of world's first pre-5G mobile user equipment.
- Data-plane technical support for the 5G demo at *Winter Olympics (South Korea, 2018)*.
- *Parallelization, memory management and flow control* research: improved throughput, ultra-low latency reliable transport, and reduced memory footprint on 5G Distributed Units.

Reinforcement Learning based radio-resource schedulers (GLOBECOM '20)
- Modeled scheduling as a Partially Observable Markov Decision Process to solve multi-objective optimization in stochastic input-driven environments.

Birla Institute of Technology and Science **Pilani, India**
Research Student *2015–2016*
Advisor: Dr. Tapomoy Guha Sarkar
Studying Quantum Chaos in Aubry-André-Harper electron systems (PhysRevA '16)
- Studied phase transitions in Hofstadter's butterfly under time-varying magnetic field and the relationship between topological invariants and Hall conductivity.
- Simulated and computationally evaluated solutions to Schrodinger's equation for special quantum systems using perturbation methods and computational physics algorithms.

Advisor: Prof. Sundar Balasubramaniam
Fast semantic matching of strings in Context-Free Grammars
- Designed a framework to develop semantic hash functions of parse trees in domain-specific CFGs.
- Demonstrated the efficiency and expressiveness by finding semantic duplicates in a large XML DB.

National Central University **Zhongli, Taiwan**
Undergraduate Research Assistant *Summer 2015*
Advisor: Dr. Ko Chung-Ming
Gravitational lensing in elliptical galaxies
- Analytically derived the gravitational lensing equation for elliptical galaxies.
- Developed a *distributed recursive sub-gridding* algorithm to numerically simulate the lensing.

Industry Experience

Confluent **Mountain View, CA**
Software Engineering Intern *Summer 2020*
Kubernetes control plane for deployment life-cycle management of Kafka clusters.
Designed *safe and seamless live migration* of Kafka deployments with no service disruption.

Symantec **Bangalore, India**
Software Engineering Intern *Spring 2017*
Designed a proof-of-concept cloud-ready web application to automate purchase, delivery & installation of SSL certificates for services hosted on Amazon AWS.

Microsoft R&D **Hyderabad, India**
Software Engineering Intern *Summer 2016*
Integrated Azure AD cloud authentication/authorization service into ASP.NET Core.

Bhaskaracharya Institute for Space Applications and Geoinformatics **Gujarat, India**
Summer Intern *Summer 2014*
Developed image processing software for stitching and geo-registration of large satellite images.

Google Summer of Code **Apache Software Foundation**
Open-source Intern *Summer 2013*
Document version-control toolbar integrated with cloud repositories in Apache OpenOffice.

Publications

- Rajath Shashidhara, Timothy Stamler, Antoine Kaufmann, and Simon Peter.
  FlexTOE: Flexible TCP Offload with Fine-Grained Parallelism.
  USENIX Symposium on Networked Systems Design and Implementation (NSDI 22), Apr 2022.
  arXiv: 2110.10919, Oct 2021.
- Jitender Singh Shekhawat, Rishabh Agrawal, K Gautam Shenoy, and Rajath Shashidhara.
  A Reinforcement Learning framework for QoS-driven radio resource scheduler.
  IEEE Global Communications Conference (GLOBECOM 20), Dec 2020.
  DOI: 10.1109/GLOBECOM42002.2020.9322182
- Tridev Mishra, Rajath Shashidhara, Tapomoy Guha Sarkar and Jayendra N. Bandyopadhyay.
  Phase transition in an Aubry-André system with a rapidly oscillating magnetic field.
  APS Physical Review A, Nov 2016.
  DOI: 10.1103/PhysRevA.94.053612

Theses

- **TASNIC: a flexible TCP offload with programmable SmartNICs.**
  Master's Thesis, *The University of Texas at Austin*, May 2021.
  DOI: 10.26153/tsw/14442
- **Driven Aubry-André-Harper systems.**
  Master's Thesis, *Birla Institute of Technology and Science, Pilani*, Dec 2016.

Talks

- **FlexTOE: Flexible TCP Offload with Fine-Grained Parallelism**
  - Google Networking Research Summit, March 2022
  - VMware, March 2022
  - USENIX Symposium on Networked Systems Design and Implementation (NSDI 22), April 2022
  - SmartNICs Summit 2022, San Jose, CA

Awards

Best Student of Batch 2017: adjudged by Dept. of Physics, BITS Pilani

BITS Pilani MCN Scholarship: 80% tuition fee waiver for all semesters (top 5% of 800 students)

Prof. I J Nagrath Student Project Fund: awarded by BITSAA & Dept. of EE, BITS Pilani

Samsung Annual Excellence Awards: organization-wide award for technical excellence

Samsung Professional Software Competency: held by < 10% employees globally when obtained

Service

- **EuroSys 2022**: Shadow PC
- **OSDI 2022**: Artifact Evaluation Committee
- **USENIX ATC 2022**: Artifact Evaluation Committee

Teaching

- **Datacenters**: Spring 2022, University of Washington
- **Cloud Computing**: Spring 2020, The University of Texas at Austin (*Score: 4.8/5*)

Skills

Languages: C/C++, Java, Python (+numpy/matplotlib/PyTorch), Go, Julia, LaTeX, P4, JavaScript
Frameworks: MPI, OpenMP, Pthreads, DPDK, NodeJS, Kubernetes
Tools: git, gdb, make, valgrind, strace, perf, qemu–kvm

Last updated on September 24, 2022.
